TENCATE NICOSIL® CLASSIC SILAGE COVER

Essential silage protection on any silage type.

The proven combination of TenCate Nicosil® Classic and the TenCate Nicosil® Sandbags offers a perfect protection against wind, rain, hail, birds and cattle under all weather conditions for many years.

The TenCate Nicosil® nets cover and protect the silage film. The sandbags are applied to secure and to close the nets and the film. When using TenCate Nicosil® the use of labour intensive covers like car tyres or sand are no longer needed. Moreover this strong net is very lightweight and can therefore be handled quick and easy, even by one person. This will save time and effort during winter times.

TENCATE NICOSIL® CLASSIC SILAGE PROTECTION

TenCate Nicosil® Classic silage protection nets are completely seamed. The nets have a very high tensile strength. The smooth fibers and open structure will prevent the wind to get a grip on the cover. The silage protection can be recognized by the woven logo, the symbol for durability, efficiency and high quality.

Each individual TenCate Nicosil® protection net has a label with the production date and are guaranteed for more than 10 years thanks to the high production standards.
